HOW TO MEASURE AND CONVERT CURRENT

CURRENT TRANSDUCERS WITH ANALOG OUTPUT

Current transducers with output in volts or milliAmperes (also available with power from measurement loops, ModBUS interface and contacts digital to handle alarms) provide current measurements that can be directly acquired by PLCs, indicators, and acquisition and control systems, without the interposition of separate transducers and without wiring for auxiliary power. The measurement conversion stage and generation of the output signal is integrated within the transducer. Modular panel-mounted current converters measure alternating current applied at the input or acquired via sensors and then provide standard mA or V signals directly proportional to the measured current.

T201 SERIES - OPEN CORE CURRENT TRANSDUCERS OPEN WITH ANALOG OUTPUT

MODULAR CONVERTERS WITH ANALOG OUTPUT

CURRENT SENSORS AND MEASUREMENT INSTRUMENTS

Rogowski sensors are flexible coils without a magnetic core placed around the current conductor. They are suitable for making measurements high current by winding large bundles of cables, bus bars, irregularly shaped conductors and with difficult access. Current shunts detect current flow through a precision low ohmic value resistor inserted in the current path. Zero current sensors Flux use a winding that makes them ideal for high-precision measurements. Also available are ammeters, current clamps and multimeters that allow current to be measured quickly with diagnostic functions and without interrupting circuits.

ROGOWSKI COILS - RC150 SENECA SERIES

SHUNTS

ZERO FLUX SENSORS

CURRENT CLAMPS

CURRENT TRANSFORMERS (CT)

Current transformers or CTs consist of two windings insulated from each other and a magnetic core. The primary winding is passed through by the current to be measured, while the secondary winding supplies the measuring instruments. CTs are characterized by the transformation ratio between the primary and secondary current. They can be primary-through (hollow or busbar) to reduce the primary current to a secondary value of a few amperes, primary-wound (with low primary values or with high power associated with small CT size), toroidal CTs in which the conductor passes through the central hole and on the core are wound coils.

CT WITH PRIMARY WINDING

CT WITH PRIMARY WRAP

T201 SERIES CURRENT TRANSDUCERS CONDUCTOR - CABLE SIZING

$$D=2\sqrt{\frac{S}{\pi}}$$

D=diameter
S=diameter

For the determination of current carrying capacity and cable installation method, we have reference was made to IEC 60364-5-52, which considers the reference temperature of the conductor at 70°C and the ambient temperature at 30°C. It should be noted, however, that the determination of the sizing of cables and insulated bars (cross section, thickness, diameter, length) in relation to the intensity of the current flowing through them should be related to various parameters and criteria such as heat balance, insulations, feeds, materials, the voltage drop and power loss of each specific installation. Therefore, the data in these tables should be interpreted and contextualized in the context of electrical design, wiring and analysis of the electrical features of the devices and components used.

T201 SERIES

CURRENT TRANSDUCERS

CONDUCTOR – INSULATED BUSBAR SIZING

Solid Copper bars are used in electrical panels, for power distributions and when pre-defined connection, branch and fastening points are not available. Solid Copper Bars with rounded edges are excellent electrical conductors and are valued for ductility, sturdiness and strength. In addition to electrical panels, they are used for distribution or transportation of electricity, in the production of blinds, conduits electrical and power supply lines in industrial electrical installation with thicknesses typical of 4, 5, 10 mm and lengths of 1750 and 4200 mm.

200 x 10	2000	2690	4310	5610		3564	5711	7433	

Example of bar selection. For $I_n = 800\text{ A}$; maximum operating temperature $T_{\text{max}} = 85^\circ\text{C}$; number of bars in parallel = 1.

Since the thermal rise $T = T_{\text{max}} - T_a = (85 - 35) = 50^\circ\text{C}$, bars with $I_n \geq 800\text{ A}$ are selected from the tables with T 50 °C:

pre-drilled copper bar: 63x5 ($I_n = 951\text{ A}$)
 copper solid bar: 63x5 ($I_n = 951\text{ A}$), 40 x 10 ($I_n = 944\text{ A}$)
 aluminum solid bar: 50 x 10 ($I_n = 874\text{ A}$)

AC/DC Current Transducers

T201 Series AC/DC current transducers are devices converting the measured current value (up to 600 A) into a 4..20 mA or 0..10 V normalized industrial signal. Most models of **T201** Series are UL certified and feature low power consumption, measurement scales that can be set via DIP-switches or software (-M, -MU versions) and high accuracy guaranteed by lack of thermal drift. There are 19 models available with different measurement principles, patented technology, Effect Hall or TRMS with bipolar input range. Some models are equipped with RS485 ModBUS RTU and open core housing.

INPUT
Up to 600 A

Resolution	13 bits (10,000 points)	13 bits (10,000 points)	13 bits (10,000 points)
Max load	> 2 kOhm	> 2 kOhm	> 2 kOhm
Error for EMI	<0,5%	<1%	<1%
Thermal drift	< 200 ppm/K	< 200 ppm/K	< 200 ppm/K
Response time	Fast filter: 800 ms Slow filter: 2 s	Fast filter: 800 ms Slow filter: 2 s	Fast filter: 800 ms Slow filter: 2 s
Digital channels	1	1	1
Function	Alarm (as alternative to analog channel)	Alarm (as alternative to analog channel)	Alarm (as alternative to analog channel)
Type	PNP active output, 50 mA max.	PNP active output, 50 mA max.	PNP active output, 50 mA max.
CONDUCTOR SIZING			
Max cable cross section	300 mm ²	300 mm ²	300 mm ²
Max cable diameter	33 mm (FG16R16)	33 mm (FG16R16)	33 mm (FG16R16)
Max through-bar size	2 coupled 32x5 mm bars with a maximum capacity of 695 A (T 30°C) or 920 A (T 50°C)	2 coupled 32x5 mm bars with a maximum capacity of 695 A (T 30°C) or 920 A (T 50°C)	2 coupled 32x5 mm bars with a maximum capacity of 695 A (T 30°C) or 920 A (T 50°C)

APPLICATION SCENARIOS

PHOTOVOLTAIC SYSTEMS

WIND INDUSTRY

ELECTRIC MOTORS

GALVANIC TREATMENTS

ELEVATORS

GALVANIC TREATMENTS

PUBLIC LIGHTING

ELECTRIC MOBILITY
